

Technical announcement 2

Strength Global

Dear Students!

For the oral part of the global please prepare paper and drawing tools, in order to show figures as answers through the camera.

A trial test is now available in the Moodle page, for you to test the environment. It has similar settings to the live exam, except for the fact that the trial test accepts unlimited attempts, the live test will accept 2 attempts. (An attempt is a set of results submitted to the Moodle system). It is important that you submit the attempt, after which you get a review page showing your mistakes. In the live test 2 attempts mean one chance of checking the results. The system will take the better result of the two attempts.

For the calculation results the system has a relative tolerance of 1% for all the problems, except for those involving iteration, where this limit is 5%.

Kind regards: Baranyai Tamás
